

Concrete Block Making Machine

This machine is designed for producing various concrete blocks, pavers, and bricks. It utilizes a hydraulic system for powerful pressing and precise molding.

Product Overview

High-Efficiency Concrete Block Production

The QFT5-15 is a robust, automated solution engineered for high-volume manufacturing of concrete blocks, pavers, and bricks. Featuring a powerful hydraulic pressing system and precise molding capabilities, it ensures consistent quality and structural integrity. Its modular construction and quick mold-changing functionality allow for versatile production scaling to meet diverse construction demands.

Performance Metrics

Core Features

Automated Feeding, Hydraulic Pressing, Quick Mold Change, Adjustable Vibration

Technical Details

Production Capabilities

- Concrete block production
- Paver manufacturing
- Brick molding
- High-volume throughput

Operational Advantages

- Durable construction for longevity
- Minimal maintenance requirements
- Precise automated ejection system
- Modular design for system expansion
