

Concrete Block Making Machine

This automatic concrete block making machine efficiently produces various concrete blocks, bricks, and pavers. It features a hydraulic system, PLC control, and material feeding for consistent mixture delivery.

Overview

High-Efficiency Concrete Block Production

This automatic concrete block making machine is engineered for high-volume production of diverse masonry products, including bricks, pavers, and various concrete blocks. Featuring a robust hydraulic system and advanced PLC control, it ensures consistent output and precision molding for large-scale construction demands. The modular design allows for rapid adaptability by simply changing molds to meet specific project requirements.

Technical Specifications

Automation Level

Automatic • PLC Controlled

System Components

- Hydraulic Pressing Unit
- Automated Material Feeding System
- Integrated Concrete Mixer
- Material Conveyor
- Centralized PLC Control Panel

Production Capabilities

Suitable Products

Concrete Blocks, Bricks, Pavers

Versatility

Changeable mold system for varied shapes and sizes
