

Concrete Block Making Machine

This concrete block making machine efficiently produces high-quality concrete blocks. It features a robust design and intelligent control system for precise and consistent block production.

Overview

High-Efficiency Intelligent Block Production

The Supersonic series is a high-efficiency intelligent block machine designed to meet diverse customer requirements, from special-shape cement products to hollow, paving, curb, and solid bricks. This advanced system features electro-hydraulic integrated technology and suspension-type vibration, ensuring high output, low noise pollution, and superior stability. With an intelligent control system and remote troubleshooting capabilities, it minimizes labor costs and maximizes operational efficiency for large-scale manufacturing.

Key Features

Machine Capabilities

- Intelligent control system
- Electro-Hydraulic integrated technology
- Suspension Type Vibration for noise reduction
- Fault Alarm System
- Material-Ratio program saved in PLC
- Intelligent remote control

Product Applications

Compatible Product Types

Hollow bricks, Paving bricks, Curb stones, Solid bricks, Special-shape cement products
