

Concrete Block Splitter for Pavers and Stone

This concrete block splitter is engineered for efficient and precise splitting of concrete blocks, pavers, and natural stone. It features a heavy-duty hydraulic system that delivers consistent splitting force for uniform results.

Overview

High-Efficiency Concrete Block Splitting

This concrete block splitter is engineered for efficient and precise splitting of concrete blocks, pavers, and natural stone. Featuring a heavy-duty hydraulic system, it delivers consistent splitting force for uniform results. The machine is designed with adjustable blades to accommodate various block sizes, making it an ideal solution for landscaping, masonry, and construction applications.

Technical Specifications

Key Design Features

- Stable structure
- High-frequency pressure forming
- Rotating multi-layer feeding
- Adjustable blades for various sizes

Operation Model

Rotating-disk type

Post-Production Processing

Sandblasting, Washing, Archaizing, Brushed processing

Safety & Compliance

Safety Equipment

Blade guards • Emergency stop controls

Applications

Compatible Products

- Stripe pavers
- Terrazzo pavers
- Blind pavers
- Chromatic tiles
- Top-colored tiles
