

Concrete Curb Forming Machine

This curb forming machine is engineered for efficient and precise creation of concrete curbs. Its robust construction and advanced hydraulic systems ensure reliable operation for various construction applications.

Product Overview

Professional Curb Forming Solution

The SZ-250T is a robust and efficient machine designed for the high-precision production of concrete curbs. Featuring an automated material feeding system and a powerful hydraulic pressing mechanism, it ensures consistent compaction and durable results for every unit. This versatile equipment is engineered for large-scale infrastructure projects, offering contractors a reliable way to improve operational efficiency and curb quality.

Technical Specifications

Ideal Applications

- Road construction
- Infrastructure projects
- Landscaping

Key Features

Hydraulic Pressing, Automated Conveyor Feeding, Modular Design, High Productivity

Operational Details

Design Advantages

- Compact footprint for maneuverability
- Modular construction for easy maintenance
- Customizable for project-specific requirements

Control System

Integrated control panel for precise adjustment and monitoring of forming parameters.
