Overview

Professional Concrete Curb Paver

This specialized construction machinery is engineered for the automated and precise laying of concrete curbs, significantly streamlining the construction process. Featuring a robust self-propelled chassis and advanced extrusion technology, it ensures consistent dimensions and alignment across various curb profiles. With intuitive hydraulic controls and a durable design, this paver is an essential asset for road construction and landscaping projects of any scale.

Technical Features

Key Capabilities

- Automated concrete curb and pavement laying
- Self-propelled chassis for mobility
- Integrated concrete hopper and extrusion system
- Hydraulic control system for precise adjustments
- Adjustable curb profile and placement settings
