

# Concrete Floor Saw with Honda Engine

This floor saw is designed for strength, durability, and performance on concrete and asphalt. The reinforced steel box frame reduces vibrations, enhancing blade performance and extending the life of the saw.

## ADDITIONAL IMAGES

## Overview

### Professional Concrete Floor Saw

This high-performance floor saw is engineered for durability and precision in both concrete and asphalt cutting applications. Featuring a reinforced steel box frame, the design effectively minimizes vibration to ensure straight, accurate cuts while extending the lifespan of both the saw and the blade. Equipped with a reliable air-cooled engine, this unit offers robust power, an integrated water cooling system for dust suppression, and user-friendly controls like an easy-crank depth adjustment for efficient operation on job sites.

## Performance

### Engine Power

**9.8 kW**

Power (kW)

**13 HP**

Power (HP)

### Cutting Capabilities

Metric	Value
Max Cutting Depth	14 cm (5.5 in)
Blade Size Range	30-40 cm (12-16 in)

## Design & Build

Durable frame design with integrated water cooling system for efficient dust control.

### Key Construction Features

- Reinforced steel box frame for reduced vibration
- Japanese shaft bearings for extended service life
- Hinged, lift-up blade guard for easy maintenance
- Integrated water system for blade cooling
- Manual push driving mechanism

### Physical Specifications

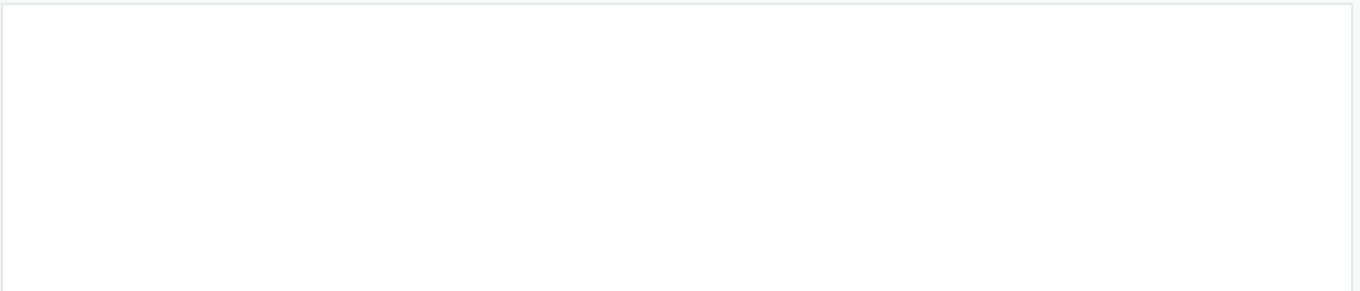

**144 kg**

Operating Weight

**35 L**

Water Tank Capacity

## Operation

Easy-to-access throttle and depth adjustment controls for precise cutting operations.

### Operational Controls

Handle Rotation Depth Adjustment, Manual Push Drive, Standard Throttle Control, Saw Position Guide
