

Concrete Mixing Plant

This concrete mixing plant is designed for high-volume concrete production. It features multiple silos for storing raw materials and a central mixing unit with a control room.

Overview

High-Efficiency Concrete Mixing Plant

This industrial-grade concrete mixing plant is engineered for high-volume production, making it an essential asset for large-scale construction projects. Featuring a robust steel structure and a centralized control room, the system ensures precision and efficiency in material handling. The plant is equipped with multiple cylindrical silos with conical bottoms to facilitate smooth discharge of cement, sand, and aggregates, ensuring a continuous and reliable concrete supply.

Technical Specifications

Production Capacity

120 m³/h

Hourly Output

Key Components

- Central Mixing Unit
- Raw Material Silos
- Integrated Control Room
- Steel Support Structure

Storage Silos	4 units
---------------	---------

Compliance & Standards

Certifications	ISO 9001, CE Certified
