

Concrete Placement Boom

This specialized machinery is designed for precise concrete placement. It features a boom extending from a central chassis, supported by a tripod base for stability.

Product Overview

Professional Concrete Placement Solutions

This concrete placement boom is engineered for high-efficiency material distribution on demanding construction sites. Featuring a robust chassis supported by a stable tripod base, this equipment ensures precise and reliable concrete delivery. It integrates advanced hydraulic components and control mechanisms to withstand rigorous operational environments.

Technical Specifications

Core Components

- Hydraulic System
- Boom Extension
- Concrete Delivery Piping
- Control Mechanisms

Equipment Type	Concrete Placement Boom
Stability System	Tripod Base, Heavy-Duty Chassis
