

Concrete Pump for Construction

This high-performance concrete pump is designed for efficient and reliable concrete placement on construction sites. The robust machine features a powerful engine, advanced hydraulic system, and durable pumping unit, ensuring consistent and high-volume output.

Overview

High-Performance Concrete Pump

This robust concrete pump is engineered for efficient and reliable concrete placement on demanding construction sites. Featuring a powerful engine, advanced hydraulic system, and a durable pumping unit, it ensures consistent, high-volume output for large-scale projects. Its compact design and optimized material flow allow for excellent maneuverability and ease of use across diverse job site conditions.

Performance Metrics

Rated Output

80 m3/h

Model Capacity

Technical Features

Key Features

- Powerful engine for consistent performance
- Advanced hydraulic system
- Durable, high-volume pumping unit
- Large capacity hopper
- Optimized material flow design

Operational Capabilities

Operational Advantages

Compact Design, High Maneuverability, User-Friendly Controls, Enhanced Safety Features

Compliance & Standards

Safety Compliance

Safety Certified • Industrial Grade
