

Concrete Pump Truck

This high-performance concrete pump truck is designed for efficient and reliable concrete placement on construction sites. It features a multi-section boom for extended reach and precise control, enabling access to challenging locations.

Overview

High-Performance Concrete Pumping

This concrete pump truck is engineered for efficient and reliable concrete placement across demanding construction environments. Featuring a robust multi-section boom, it offers extended reach and precise control, allowing operators to access challenging locations with ease. The integrated high-capacity pumping system ensures a consistent flow rate, minimizing downtime and maximizing productivity on large-scale projects like high-rise developments and bridge construction.

Technical Specifications

Performance Metrics

46 m Boom Reach	420 HP Engine Power
---------------------------	-------------------------------

Key Features

Multi-section Boom, Advanced Hydraulic System, High-Flow Pumping, Heavy-Duty Construction

Applications

Ideal For

- Large-scale construction projects
- Bridge building
- High-rise developments
