

Concrete Vibratory Truss Screed

This vibratory truss screed is used for ground preparation and concrete slurry compaction. It is ideal for leveling roads, workshops, and other construction sites.

Product Overview

Professional Concrete Finishing

This high-performance vibratory truss screed is engineered for the efficient leveling and consolidation of large-scale concrete surfaces. Utilizing a powerful integrated gasoline engine, the unit effectively removes air pockets to ensure a dense, level finish ideal for roads, bridges, and heavy-duty industrial floors. Its robust frame and precision-adjustable controls provide professional-grade reliability and ease of operation on demanding job sites.

Technical Specifications

Engine Series	GX Series
Primary Applications	Road Construction, Bridge Decking, Industrial Flooring

Key Features

Performance Benefits

- Integrated vibration mechanism for air pocket removal
- Consolidates concrete for superior material density
- Adjustable controls for high-precision leveling
- Robust truss frame construction for durability
