

Condensate Removal Pump for HVAC Systems

This condensate pump is designed for removing condensate water from air conditioners and other HVAC equipment. It features a float switch for automatic operation and a discharge tube for easy connection.

Product Overview

Versatile Condensate Management

This compact condensate removal pump is designed for HVAC systems where gravity drainage is not possible. It features a low-noise, vibration-free operation, making it ideal for quiet indoor environments. The unit is compatible with global voltage standards and is engineered for easy assembly in various air conditioning configurations.

Technical Capabilities

Voltage Support

Universal Voltage

Compatible AC Units

Inlaid Type, Ceiling Suspended, Disconnect-type

Performance

Operating Noise

Ultra-quiet, non-vibration design

Model Variants

Model Numbers

- RTK-24B
- RTK-40B

Installation

Design Features

- Compact construction
- Easy assembly
- Durable plastic housing
- Integrated float switch for automatic operation
