

Connecting Rod for Internal Combustion Engines

Connecting rods for internal combustion engines. These rods connect the piston to the crankshaft, transmitting power from the piston to the crankshaft.

Product Overview

Precision-Engineered Connecting Rods

These high-performance connecting rods are essential components for internal combustion engines, designed to bridge the piston and the crankshaft. Engineered to withstand extreme stress and high-temperature operating conditions, they ensure efficient power transmission and rotational motion. Each rod features an optimized weight distribution to enhance engine durability and overall performance.

Technical Specifications

Application

Internal Combustion Engines

Material

High-strength steel alloy

Part Identification

1520006580

Performance Features

Key Benefits

- High-temperature resistance
- Optimized weight distribution
- Enhanced durability under high stress
- Efficient power transmission
