

Construction Engineering Software Development

Software development services cater to the construction engineering and chemical coatings sectors. System integration and information technology support are also provided.

Overview

Professional Construction & Chemical Software Solutions

This software development service specializes in creating advanced digital tools for the construction engineering and chemical coatings sectors. The solution offers comprehensive system integration and information technology services designed to streamline industry workflows. By leveraging strong R&D capabilities, it delivers specialized tools like architectural color design software and electronic color cards to enhance precision in project management.

Key Features

Core Capabilities

- Construction engineering software development
- Chemical coatings industry solutions
- System integration services
- Architectural color management
- Database query systems for raw materials

Industry Applications	Construction Engineering, Chemical Coatings, Architectural Design, E-commerce Solutions, Enterprise Management
-----------------------	--

Technical Specifications

Database Features

- Emulsion database integration
- Pigments and fillers database
- Vendor information management
- Product data tracking
- Experimental data statistical analysis

Specialized Software Tools

Tool Name	Primary Function
Architectural Color Electronic Card	Digital color management
Architectural Color Design Software	Design and visualization
Raw Material Query System	Emulsion, pigment, and filler data analysis
