

# Construction Machinery Gearbox

This gearbox is designed for heavy-duty construction machinery applications. It features a durable housing and precision-engineered gears to ensure reliable power transmission and long-lasting performance.

## Overview

### Robust Power Transmission

The YJ290 is a high-performance gearbox specifically engineered for heavy-duty construction machinery. Designed to withstand demanding operating environments, it ensures reliable power transmission for equipment such as excavators and loaders. Its compact design facilitates seamless integration, while optimized gear ratios and high torque capacity deliver superior efficiency.

## Technical Details

### Design Specifications

- High torque capacity
- Optimized gear ratios
- Compact design
- Durable housing

Model Number	YJ290
Compatible Machinery	Excavators, Loaders, Heavy Construction Equipment

## Performance Metrics

### Key Performance Indicators

**290 YJ**

Series Rating
