

Construction Scaffolding System for Stadiums

This scaffolding system is designed for use in the construction of stadiums and sports complexes. It provides a safe and stable platform for workers during building and maintenance.

Product Overview

Professional Scaffolding for Stadiums

This construction scaffolding system is engineered for large-scale infrastructure projects, including stadiums and complex sports complexes. Designed to support heavy-duty construction and maintenance tasks, it offers high stability and safety for high-rise building environments. The system is built to withstand rigorous industrial demands, ensuring reliability in demanding engineering applications.

Technical Capabilities

System Strengths

High Load Capacity • Safety Certified • Industrial Grade • Versatile Configuration

Primary Applications

Stadium Construction, High-rise Buildings, Industrial Maintenance, Infrastructure Projects, Heavy Engineering

Logistics & Capacity

Daily Excavation/Rock Blasting Capacity

100000 m3

Rock Blasting/Digging Capacity

Concrete Production Capacity

1200000 m3/year
