

Construction Tower Crane

This tower crane is used in construction for lifting heavy materials. It features a vertical lattice tower, horizontal jib, and counterweight for balance.

Overview

High-Performance Tower Crane

This construction tower crane is engineered for demanding high-rise building projects, offering exceptional vertical reach and heavy-load handling capabilities. Featuring a robust lattice-structured tower and a balanced jib system with counterweights, it provides the stability and precision required for efficient material placement. Designed for safety and reliability, this crane is an essential asset for large-scale infrastructure and commercial construction sites.

Technical Specifications

Primary Application

High-rise construction • Heavy material handling

Structure Type

Lattice-structured tower

Stability Features

Concrete base, Counterweight system, Lattice tower design
