

Container Chassis Trailer

This container chassis trailer is designed for transporting shipping containers. It features a robust steel frame, tandem axles, and landing gear for stability when detached from a tractor.

Product Overview

Professional Container Chassis Trailer

This robust container chassis trailer is specifically engineered for the efficient transport of shipping containers in demanding logistics environments. Designed with a high-strength steel frame and tandem axles, it provides the structural integrity required for heavy-duty freight operations. The inclusion of versatile twist locks ensures compatibility with various container sizes, making it an ideal asset for ports, intermodal facilities, and freight yards.

Technical Specifications

Frame Material	Robust Steel
Axle System	Tandem Axles
Securing Method	Twist Locks, Adjustable Configuration

Operational Features

Stability Equipment

- Integrated Landing Gear
- Detachable Support System

Application

Primary Use Cases

Port Operations • Intermodal Facilities • Freight Yards
