

Containerized Asphalt Mixing Plant

This containerized asphalt mixing plant is a modular and mobile solution for asphalt production. Designed for easy transportation and quick installation, the plant integrates key components into containers, ensuring efficient operation and environmental protection.

Overview

Modular Asphalt Production

The Containerized Asphalt Mixing Plant is a portable, modular batching solution designed for efficiency and rapid deployment. Its containerized architecture allows for easy transportation and quick, foundation-free installation, making it highly adaptable for various construction sites. The system integrates cold aggregate feeding, drying, screening, mixing, and intelligent control systems to deliver high-quality asphalt mixtures with precise weighing and batching capabilities.

Technical Specifications

Production Capacity

80 t/h

Minimum Capacity

400 t/h

Maximum Capacity

Model Series

CFB80 ~ CFB400

Key Features

Design Highlights

- Containerized modular design for easy transport
- Foundation-free setup for quick installation
- Intelligent operation control system
- Accurate batch weighing
- Integrated dust collection and emission control

Operational Benefits

High-quality output • Cost-effective • Mobile • Long service life • High resale value
