

Continuous Band Sealer

This continuous band sealer is designed for high-volume packaging operations. It features a motorized conveyor belt, adjustable temperature control, and a horizontal configuration for easy integration into production lines.

Overview

High-Volume Sealing Solution

This continuous band sealer is engineered for high-volume packaging environments, offering reliable performance for automated production lines. It features a motorized conveyor belt system and adjustable temperature controls, ensuring consistent and precise seals across various thermoplastic materials. Designed for seamless integration, this horizontal configuration unit supports efficient workflow optimization in industrial packaging settings.

Technical Specifications

Core Features

- Motorized conveyor belt for automated feeding
- Adjustable temperature control
- Robust stand included
- Horizontal configuration for production line integration

Compatible Materials

PE, PP, Laminates, Thermoplastics

Optional Add-ons

Optional Features

Gas Flushing • Coding Devices
