

# Continuous Casting Equipment

Continuous casting equipment is used in metal production to create items with a consistent shape. It is designed for efficient manufacturing of various metal profiles.

## Product Overview

### Continuous Casting System

This continuous casting equipment is designed for high-efficiency industrial metal processing. It features a robust modular design, incorporating multiple fluid and gas transfer connections to handle complex metallurgical workflows. Built for integration into large-scale production lines, this system ensures consistent output and reliable performance in demanding industrial environments.

## System Configuration

Design Features	Modular Design, Rectangular Frame, Multi-input Fluid Transfer, Industrial Grade
Equipment Class	Continuous Casting Line
