

Continuous Casting Middle Tanker

This tanker is used in continuous casting processes to support molten steel handling. It facilitates transportation, lifting, and weighing with interconnected tankers, a lifting device, and an operation platform.

Product Overview

Continuous Casting Middle Tanker

The Continuous Casting Middle Tanker is an essential component of industrial casting equipment, designed to provide comprehensive support for molten steel management. This robust system facilitates the reliable transportation, lifting, and precise weighing of molten steel during the casting process. Engineered for durability and efficiency, it integrates seamlessly with orbit-mounted frames, lifting devices, and manipulator operation platforms to ensure smooth operational flow in demanding environments.

Operational Functions

Core Functions

- Molten steel support
- Transportation
- Lifting
- Weighing

System Integration

Equipment Category

Continuous Casting Equipment

System Components

Orbit-mounted frame, Lifting device, Installation tanker, Manipulator operation platform
