

Continuous Positive Airway Pressure (CPAP) Machine

This device is a Continuous Positive Airway Pressure (CPAP) machine used for treating sleep apnea. It delivers constant air pressure to maintain open airways during sleep.

Product Overview

About This CPAP Machine

This Continuous Positive Airway Pressure (CPAP) machine is a reliable medical device specifically engineered to treat sleep apnea by maintaining open airways throughout the night. It delivers a consistent stream of air pressure, ensuring uninterrupted breathing during sleep cycles. Designed with portability and home use in mind, it combines professional-grade therapy with an intuitive user interface for effective monitoring.

Technical Details

Key Features

- Steady air pressure delivery
- Compact and portable design
- Integrated display screen
- Standard hose connector compatibility

User Interface

Adjustable Settings • Therapy Data Monitoring • Push-Button Controls

Primary Application

Sleep Apnea Treatment, Home Use, Respiratory Support
