

Convection Space Heater with Turbo Fan

This convector heater is designed for household use. It utilizes convection and a turbo fan to efficiently distribute heat throughout a room, providing rapid and uniform warming.

Overview

Efficient Heating Solution

The DL07 Turbo convector heater is a versatile space heating apparatus designed for effective household use. It utilizes natural convection principles combined with an integrated turbo fan to ensure rapid and uniform heat distribution throughout any room. Built with safety and convenience in mind, this unit features a durable perforated metal front panel and adjustable controls for a customized heating experience.

Technical Specifications

Controls

- Adjustable Thermostat
- Adjustable Power Settings

Heating Method	Convection with Turbo Fan
Safety Features	Overheat Protection, Perforated Front Panel

Design & Build

Mounting Type

Freestanding

Construction	Perforated metal front panel
