Conventional Welding Roller Bed

The roller bed's rotating speed can be designed as per needs. It can handle rollers over 100 tons or special type welding roller bed.

Overview

Conventional Welding Roller Bed

The Conventional Welding Roller Bed is a versatile solution designed for heavy-duty welding applications. It features customizable rotation speeds tailored to specific process requirements and supports substantial load capacities exceeding 100 tons. With options for both manual and motorized center distance adjustment, it provides the precision and flexibility needed for diverse workpiece sizes.

Technical Capabilities

Load Capacity

100 Tons+
Capacity

Adjustment Methods	Manual, Motorized (Screw), Motorized (Keyer)
Rotation Speed	Customizable based on specific process requirements

Configuration

Series Designation
KT Series

Standard Set Configuration	4 sets
