

# Conveyor Belt Spot Repair Vulcanizer

This spot repair press efficiently mends small holes in conveyor belts. Suitable for all rubber belt types and widths, it reduces the need for full belt replacement.

## ADDITIONAL IMAGES

## Product Overview

### Industrial Spot Repair Solution

This V-type vulcanizing machine is engineered for the efficient and reliable on-site repair of conveyor belts, helping to minimize operational downtime. Designed for demanding environments like mining and metallurgy, it utilizes a V-shaped heating element to ensure uniform heat distribution and a strong, durable bond. The system integrates precise temperature control and a hydraulic pressure unit, making it a portable and robust tool for field maintenance.

## Technical Specifications

### System Components

- V-shaped heating platen
- Hydraulic pressure unit
- Hand-operated pump
- Pressure gauge
- Integrated control panel

### Vulcanizer Configuration

V-Type

### Primary Application

Conveyor Belt Repair, On-site Maintenance, Mining, Metallurgy, Quarrying

## Certifications & Standards

### Compliance & Certifications

CE • ISO 9001:2008 • GIC Certified • Guardian Certified
