

Conveyor Belt Vulcanizing Press

This vulcanizing press is among the most advanced in the world. It uses lighter and stronger composite materials, reducing energy consumption by 40% and enhancing safety.

Product Overview

Professional Conveyor Belt Splicing Solution

This conveyor belt vulcanizing press is engineered for efficient, on-site maintenance and repair of conveyor belt systems. Featuring a robust, modular design, the equipment includes precise hydraulic and pneumatic controls to ensure uniform temperature distribution and reliable belt joining. Designed to minimize downtime and maximize productivity, this system provides a durable solution for demanding industrial environments.

Technical Specifications

Core Capabilities

- Modular design for easy transport and setup
- Hydraulic press with multiple heating sections
- Integrated pneumatic system for pressure control
- Digital display interface for process monitoring
- Emergency stop safety feature

Performance Highlights

1 Multiple

Hydraulic Press Sections

1 Portable

Control System

Control Unit Details

Portable Control Case, Digital Display, Pressure Gauges, Emergency Stop

Compliance & Standards

Certifications

CE Certified
