

Cooling Belt Press Machine

This compact cooling belt press machine is designed for efficient heat exchange and ease of operation. Its compact size, with a length that is half of normal cooling belts, makes it suitable for various applications.

Product Overview

Compact Cooling Belt Press

The PFY-206 is a specialized cooling belt press machine engineered for efficient heat exchange in industrial applications. Its unique design offers a compact footprint, with a total length that is only half that of standard cooling belt presses, making it an ideal space-saving solution. The unit is optimized for high performance, ease of operation, and straightforward cleaning procedures.

Key Features

Key Features

Compact Design, High Heat Exchange Rate, Easy Cleaning, User-Friendly Operation

Technical Specifications

Performance Summary

Feature	Benefit
Size Efficiency	50% shorter than standard cooling belts
Heat Exchange	High efficiency rate
Maintenance	Designed for easy cleaning
