

Copper Braided Grounding Strap with Clamps

Braided copper grounding straps are designed for electrical grounding in machinery and industrial applications. They feature heavy-duty construction for reliable conductivity and secure connections.

Product Overview

High-Conductivity Grounding Solution

This copper braided grounding strap is engineered for reliable electrical grounding in industrial settings and electrified railway catenary systems. Featuring heavy-duty construction, it ensures consistent conductivity and secure connections to effectively prevent static discharge. Its robust design is specifically tailored to enhance equipment safety and operational integrity in demanding electrical environments.

Technical Specifications

Included Components

- Integrated Clamps
- Connectors
- Braided Copper Strap

Material	Copper
Primary Applications	Electrified Railway, Industrial Machinery, Electrical Grounding, Static Discharge Prevention
Construction	Braided
