

Copper Compression Lugs for Electrical Connections

High-quality copper compression lugs are designed for secure and reliable electrical connections. Suitable for various wire sizes and applications, they ensure optimal conductivity and corrosion resistance.

Product Overview

Professional Copper Compression Lugs

These high-quality copper compression lugs are engineered to provide secure and reliable electrical connections across a wide range of applications. Constructed from durable, high-conductivity copper, they ensure optimal performance and excellent corrosion resistance for long-term durability. Designed for versatility, they are an ideal solution for terminating electrical cables in power distribution, grounding systems, and various industrial electrical setups.

Technical Specifications

Key Features

- High electrical conductivity
- Corrosion resistant construction
- Durable and robust design
- Suitable for various wire sizes

Material	Copper
Common Applications	Power Distribution, Grounding Systems, Industrial Electrical Systems, Cable Termination
