

Copper Wire Connecting Tube

These copper connecting tubes are designed to create durable electrical connections. Manufactured from high-quality copper, the tubes ensure optimal conductivity and corrosion resistance.

Product Overview

High-Conductivity Cable Connectors

These GT series cable connectors are engineered for reliable connections between circular wires and power supply cables in distribution equipment. Manufactured from 99.9% pure copper and finished with a tin coating, they offer superior conductivity and corrosion resistance. Each tube is designed for secure, gas-tight crimping, ensuring long-term durability in demanding electrical environments.

Technical Specifications

Material	99.9% Pure Copper
Surface Finish	Tin Coated
Primary Application	Distribution Equipment, Electrical Panels, Grounding Systems

Design Features

Key Features

- Inspection hole for insertion depth verification
- Gas-tight crimp connection
- High corrosion resistance
- Optimal electrical conductivity
