

Copper Wire Grounding Connector

This connector is made from brass and plated with tin or copper. It is designed for connecting copper and aluminum wires in grounding applications.

Product Overview

Copper Wire Grounding Connector

This copper wire grounding connector is designed for reliable electrical performance in demanding applications. Engineered for secure connectivity, it facilitates the joining of both copper and aluminum wiring. Its durable construction and precision design ensure consistent grounding contact, making it a critical component for safe and efficient electrical infrastructure.

Technical Specifications

Application Compatibility

- Copper wire connection
- Aluminum wire connection
- Elevated electrical grounding

Material	Brass
Surface Finish	Tin Plated, Copper Plated

Design Features

Design Characteristics

1 Hexagonal

Base Shape
