

Corded Telephone

This corded telephone facilitates communication through a wired connection. It supports integration with television payment centers, enabling television banking, e-wallets, and recharge management.

Product Overview

Integrated Payment Ecosystem

This advanced corded telephone interface system serves as a central hub for television payment processing and transaction management. It facilitates seamless connectivity between user devices such as PCs and mobile phones and complex banking and telecom settlement infrastructures. Designed for robust operational support, it ensures reliable communication and efficient handling of digital recharge and e-wallet services.

System Architecture

Core Functional Areas

- Television Banking
- E-wallet Management
- Recharge Management
- Financial Settlement

System Integration Capabilities

System Category	Function
External Payment	Telecom and Mobile Recharge
Financial	Banking System Interface
Operational	BOSS Operational Support

Security Features

Smart Payment Card Support • Encrypted Payment Gateway • Secure Settlement

Supported Access Devices

Mobile Phone, Television, PC
