

Core Drill Bit for Concrete

This core drill bit is designed for creating circular holes in hard materials such as concrete and masonry. The segmented design facilitates efficient debris removal and cooling during operation.

Product Overview

Professional Core Drilling Solution

This high-performance core drill bit is engineered specifically for precision drilling in dense, hard materials such as concrete, tile, and stone. Featuring a robust cylindrical metal body with segmented cutting edges, it ensures efficient debris removal and optimal cooling during heavy-duty operations. Its durable design is optimized for professionals seeking consistent performance and reliability in demanding construction or renovation environments.

Technical Specifications

Construction Details

- Segmented cutting edge for debris removal
- Brazed or laser-welded segments
- Hardened metal body

Compatible Materials

Concrete, Tile, Stone

Tool Configuration

Cylindrical core drill bit
