

Core Drilling Machine

This core drilling machine is designed for creating precise holes in concrete, asphalt, and other hard materials. It features a powerful motor, a sturdy drill stand for stability, and a water cooling system to prolong the life of the drill bit and reduce dust.

Product Overview

Professional Core Drilling Solution

The G-200 is a robust core drilling machine engineered for high-precision hole creation in concrete, asphalt, and other demanding hard materials. It features a high-performance motor paired with a sturdy drill stand, ensuring stability and accuracy during operation. Equipped with an integrated water cooling system, the unit effectively extends drill bit longevity while simultaneously minimizing dust generation for a cleaner, safer worksite. Adjustable settings for drilling depth and angle provide the versatility required for plumbing, electrical, and general construction applications.

Technical Specifications

Key Features

- Powerful motor for demanding environments
- Sturdy drill stand for enhanced stability
- Integrated water cooling system
- Adjustable drilling depth settings
- Adjustable drilling angle settings

Primary Applications

Plumbing • Electrical Work • General Construction

Suitable Materials

Concrete, Asphalt, Hard Materials
