

# Corn and Fertilizer Seeder

This seeder is a multi-purpose implement suitable for seeding corn, sorghum, millet, beans, wheat, and other crops. It applies fertilizer while seeding in various fields, with adjustable seeding capacity, row spacing, and working width.

## ADDITIONAL IMAGES

## Overview

### Versatile Multi-Purpose Seeder

The 2BYF Seeder is a robust, multi-purpose agricultural implement engineered for efficient planting and fertilization in a single pass. Designed for versatility, it is suitable for a wide range of crops including corn, sorghum, millet, beans, and wheat. With adjustable settings for seeding capacity, row spacing, and working width, this machine provides precision and adaptability for various field conditions and farming practices.

## Capabilities

### Key Features

- Simultaneous seeding and fertilization
- Adjustable seeding capacity
- Adjustable row spacing
- Adjustable working width
- Ground-driven mechanism for synchronized operation

### Compatible Crops

Corn, Sorghum, Millet, Beans, Wheat

## Technical Details

### Construction

Robust • Durable • High-Quality Materials

### Operation Method

Tractor-mounted/drawn

### Drive Mechanism

Ground-driven
