

Corn Head Gathering Idler Sprocket - 8 Tooth

This is an 8-tooth idler sprocket designed for corn head gathering applications. It features robust construction with evenly spaced teeth for reliable chain engagement.

Product Overview

Reliable Gathering Performance

This 8-tooth idler sprocket is engineered specifically for corn head gathering applications. Designed for durability in demanding agricultural environments, it features robust construction and precise tooth spacing to ensure consistent chain engagement. Its metallic finish provides enhanced wear resistance, making it a dependable component for maintaining machinery efficiency.

Technical Specifications

Tooth Count	8 teeth
Application	Corn Head Gathering
Component Type	Idler Sprocket
Visible Markings	HXPT
