Product Overview

Industrial Grain Processing Solution

This industrial-grade roller mill is engineered for high-volume grain processing, specifically optimized for wheat and maize flour production. The system features a robust construction designed for durability in demanding environments, incorporating precision rollers and automated feeding systems to ensure consistent, uniform crushing. It is a comprehensive solution suitable for food production facilities, offering adjustable settings to control output fineness for various applications, including corn flour and animal feed production.

Technical Features

Key System Components

- Precision grinding rollers
- Automated feeding system
- Material handling pipes and hoppers
- Control panels for monitoring
- Bagging outlets

Processing Applications

Wheat Flour Milling, Maize Flour Milling, Corn Crushing, Animal Feed Production, Ugali Flour Production, Nshima Flour Production

Service & Support

Warranty & Support

1-Year Quality Guarantee • 1-Year Free Spare Parts • Turnkey Project Support • Installation Assistance • Commissioning Services
