

Corrosion-Resistant Magnetic Drive Pump for Chemical Transfer

This magnetic drive pump is designed for transferring corrosive liquids, eliminating the need for shaft seals and preventing leaks. It is constructed from corrosion-resistant materials, ensuring compatibility with various chemicals.

Product Overview

Corrosion-Resistant Magnetic Drive Pump

The MD series magnetic drive pumps are engineered specifically for the safe and efficient transfer of corrosive liquids. By utilizing a seal-less magnetic drive design, these pumps effectively eliminate shaft seal failures, preventing leaks and significantly reducing long-term maintenance requirements. Constructed from high-quality, corrosion-resistant materials, they provide reliable performance across demanding industrial environments including chemical processing, plating, and laboratory applications.

Key Features

Design Advantages

- Seal-less magnetic drive technology
- Leak-free operation
- Corrosion-resistant construction
- Low maintenance requirements

Applications

Suitable Industries

Chemical Processing, Plating, Laboratory Use, Fluid Transfer
