

Corrosive Liquid Diaphragm Pump

This diaphragm pump is designed to transport various corrosive liquids, pellet liquids, and high-viscosity fluids. It is also suitable for volatile, flammable, and toxic liquids.

Overview

Versatile Industrial Pumping Solution

This diaphragm pump is a next-generation transportation machine designed to handle a wide range of challenging industrial fluids. It is engineered to safely transport corrosive, flammable, volatile, and highly viscous liquids, as well as liquids containing pellets. Built for adaptability, this pump serves as a reliable solution for special applications where conventional pumps often fail.

Material Composition

Diaphragm Material Options

- Ding clear rubber
- Chloroprene rubber
- Fluorine rubber
- Teflon
- Poly 46 ethylene

Housing Materials

Plastic, Aluminum Alloy, Cast Iron, Stainless Steel

Capabilities

Compatible Fluid Types

Corrosive • Pellet-containing • High-viscosity • Volatile • Flammable • Violently poisonous
