

Corrugated Iron Sheet Roll Forming Machine

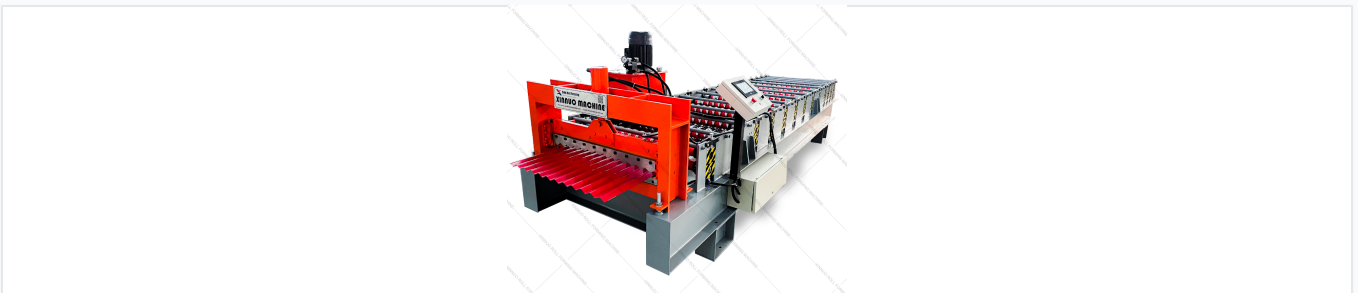

This roll forming machine produces corrugated iron sheets from aluzinc. It features precision rollers and an automated cutting system.

ADDITIONAL IMAGES

Overview

High-Efficiency Corrugated Sheet Production

This roll forming machine is engineered for the high-volume production of corrugated iron and aluzinc roofing sheets. It features a robust steel frame and 14 rows of precision rollers to ensure consistent profile accuracy and dimensional stability. With an automated hydraulic cutting system and user-friendly controls, it provides a reliable solution for manufacturing industrial cladding and warehouse roofing materials.

Performance Metrics

Key Performance Metrics

12 m/min

Max Productivity

4 kW

Motor Power

5 tons

De-coiler Capacity

Material Compatibility

Compatible Materials

Color steel plate, Aluzinc, Corrugated iron, Carbon Steel 45#

Technical Specifications

Machine Parameters

Parameter	Value
Plate Width	1000mm
Plate Thickness	0.3-0.8mm
Forming Rows	14 rows
Roller Diameter	80mm
Roller Material	Carbon Steel 45#
Cutting Blade Material	Cr12
Cutting Method	Hydraulic mould cutting
De-coiler Type	Manual

Features & Support

Key Features

- Automated hydraulic cutting system for precise length control
- Precision-engineered rollers for consistent corrugated profiles
- Robust frame construction for high-stability operation
- User-friendly control panel for speed and parameter adjustment
- Safety features including emergency stop buttons and protective guards

Applications

Primary Applications

Industrial Workshops • Warehouses • High-rise Construction • Roofing Panels • Wall Cladding

Service & Warranty

M*****j  Supplier Service: **Very satisfied** (5 stars) 13 May 2022 18:58
On-time Shipment: **Very satisfied** (5 stars)
