

Corrugated Pipe Extrusion Line

This corrugated pipe extrusion line is designed for the continuous production of single-wall corrugated pipes. The advanced machinery utilizes a high-performance extruder, precision molding system, and efficient cooling technology to ensure consistent pipe quality and dimensional accuracy.

Product Overview

High-Performance Corrugated Pipe Production

This corrugated pipe extrusion line is engineered for the continuous, high-efficiency production of single-wall corrugated pipes. It integrates a high-performance extruder, a precision molding system, and advanced cooling technology to ensure consistent quality and dimensional accuracy. Designed for versatility, the system features automatic material feeding and adjustable extrusion speeds, making it an ideal solution for manufacturing flexible conduits used in electrical, plumbing, and automotive applications.

Technical Capabilities

Production Features

- Continuous production of single-wall corrugated pipes
- Automatic material feeding system
- Precision temperature control
- Adjustable extrusion speed

Suitable Applications

Electrical Conduits, Plumbing, Automotive

System Components

Core Components

- High-performance extruder
- Precision molding system
- Efficient cooling technology
