Overview

Versatile Material Handling Solution

The counterbalanced walkie electric pallet stacker is a cost-efficient solution that combines the versatility of a counterbalance forklift with the operational benefits of a pedestrian stacker. Its legless, counterbalanced design allows for complete access to three sides of a load, making it ideal for loading and unloading at workstations, loading docks, and manufacturing floors. Compact and maneuverable, this stacker is specifically engineered for confined areas where traditional equipment with support legs cannot fit.
