

Counterfeit Banknote Detector

This compact device quickly verifies the authenticity of banknotes. It uses ultraviolet (UV) light to detect security features embedded in genuine currency.

Product Overview

Professional Counterfeit Detection

This compact counterfeit banknote detector is designed to provide reliable security for businesses handling cash transactions. It utilizes advanced UV light technology to reveal hidden security markings and watermarks on banknotes, ensuring quick and accurate verification. The device features an ergonomic design that prevents direct UV exposure to the eyes, offering a safe and user-friendly experience for daily operations.

Technical Features

Detection Methods	Ultraviolet (UV), Magnifying Glass
Light Source	UV Lamp or UV LED
