

Crane Elevator Component

This elevator component is designed for use in agricultural construction machinery, specifically cranes. It appears to be a cylindrical metal part with threading for secure connection.

Product Overview

High-Performance Crane Component

This specialized crane elevator component is engineered specifically for use in agricultural construction machinery. Featuring a robust cylindrical design with a precise flange and threaded connection, it ensures reliable integration within complex lifting systems. The durable black finish provides essential corrosion resistance, making it suitable for demanding field environments.

Technical Specifications

Surface Finish

Corrosion Resistant • Black Finish

Design Features

- Cylindrical body
- Integrated flange/collar
- Threaded base for secure attachment

Primary Application

Agricultural Construction Machinery

Part Type

Shaft / Piston

Connection Type

Threaded Mechanism
