Product Overview

Engine Performance Support

This crankshaft main bearing set is a critical component designed to ensure smooth engine operation by maintaining a stable oil film and reducing friction between the crankshaft and engine block. Precision-engineered for durability, these bearings are constructed from high-quality, wear-resistant materials including bronze. This set is essential for engine maintenance, helping to prolong engine life and provide optimal support under demanding operating conditions.

Technical Specifications

Set Quantity	18 PCS
Compatible Engine Models	4.212, 4.236

Cross Reference

Reference Part Numbers

- U5MK0265
- M5212SA
- 81558
- M7189

Material & Design

Material Composition

Bronze • Anti-friction Material • Wear-resistant Alloy
