

Crawler Steel Material Handling Machine

The crawler steel material handling machine is designed for heavy-duty applications. It features a hydraulic system and steel claw for lifting and moving steel materials on diverse terrains.

Overview

Heavy-Duty Material Handling Solution

This crawler steel machine is a robust construction vehicle engineered for heavy-duty material handling tasks. Equipped with a powerful hydraulic system and a durable steel claw, it provides efficient lifting and movement of steel materials. Its crawler tracks ensure excellent stability and maneuverability across various terrains, making it an ideal choice for construction sites, recycling facilities, and industrial environments.

Technical Specifications

Model	JY606-g
Movement System	Crawler Tracks
Key Features	Hydraulic System, Steel Claw, Crawler Tracks, Heavy-Duty

Operational Capabilities

Suitable Applications

- Construction Sites
- Recycling Plants
- Industrial Material Handling

Operator Comfort	Yes
