

Crawler Tractor for Agriculture

This crawler tractor is a versatile machine designed for various agricultural tasks. Its tracked design provides superior traction and stability on uneven terrain, making it suitable for plowing, tilling, and cultivating.

ADDITIONAL IMAGES

Overview

Professional Crawler Tractor

Designed for specialized agricultural needs, this crawler tractor is engineered for protective tilling, particularly in paddy fields. It utilizes a triangular crawler driving system to increase ground clearance and prevent sinking, ensuring soil protection during cultivation. With its compact structure and robust hydraulic transmission, it offers reliable performance and ease of operation for various farming tasks.

Technical Specifications

Available Models	SF-752, SF-502
Transmission	Hydraulic transmission
Control System	Single control lever for steering and implement lifting
Drive System	Triangular crawler driving system

Capabilities

Compatible Implements

- Rotary tiller
- Plough
- Ridging equipment
- Ditching equipment

Key Features

Protective Tilling • Paddy Field Optimized • Compact Design • Soil Protection

Hitch System	Tri-points hydraulic hanging device
