

Crop Liquid Sprayer

This agricultural machinery is designed for efficient crop spraying and liquid fertilizer application. The system features a robust frame, a large-capacity tank, and a multi-nozzle boom for uniform coverage, along with a pump and control valves for precise application rate management.

Overview

Efficient Crop Spraying Solution

This agricultural machinery is designed for efficient crop spraying and liquid fertilizer application across various field sizes. It features a robust frame construction and a large-capacity tank to support extended operation times. Equipped with a precision multi-nozzle boom and advanced control valves, it ensures uniform coverage and accurate application rate management for diverse crop types.

Technical Specifications

Suitable Applications	Crop Spraying, Liquid Fertilizer
Precision Control	Yes

Key Components

Core Components

- Robust Frame
- Large-capacity Tank
- Multi-nozzle Boom
- Pump System
- Control Valves
